

Road safety is a major concern for all of us and the large number of casualties on Europe's roads each year is unacceptable. eSafety is one of the keys to reaching the ambitious target set up by the European Commission of halving the road fatalities by 2010.

eSafety is a joint industry–public sector initiative to improve road safety by using Intelligent Vehicle Safety Systems. The objective is to join forces and to build up a European strategy for accelerating the research and development, and the deployment of Information and Communications Technologies.

What is eScope?

eScope is a European Commission funded project, which monitors and encourages eSafety activities and serves as an easily accessible and up-to-date resource for information on priority eSafety topics.

The main activities of eScope:

1. Monitoring the progress of implementing the 28 eSafety priority recommendations and of the eSafety "Road Maps" to be agreed
2. Overview of European emerging results on eSafety priority topics
3. Awareness and dissemination

How?

eScope will closely follow the work of the eSafety Working Groups and assist in the outreach of findings from all eSafety activities.

The dissemination of progress will be made through the eSafety information platform on the website **www.escope.info** and through newsletters and participation in eSafety events.

eScope has appointed a group of "Advisers" who will assure that the project activities are in line with the needs of all involved eSafety stakeholders.

Furthermore, a list of eScope "Observers" from the European Member States will follow the project closely and give input on national eSafety activities.
