

The eSafety Interactive Car: User-friendly interface to raise the awareness of eSafety Systems and technologies

The eSafety Interactive Car is a new, user-friendly interactive tool produced by eSafety Support that will explain essential information about the great potential that Active Safety Systems have in solving road transport safety problems, the technologies behind them, and above all, the benefits they can bring.

The easy-to-use interface includes:

IMAGES - see the car in a road and infrastructure environment. Specific elements of the car and the infrastructure linked to the various eSafety systems are highlighted simply by moving the cursor.

LIST OF SYSTEMS - browse the list of priority active safety systems, listed by a time-actuation basis of an incident. Scrolling and clicking over a term highlights the corresponding part(s) on the car and infrastructure concerned by the system, while a summary of the system appears in the dialog box, along with a link to a dedicated page about the system.

DESCRIPTIONS - get instructive information about the system and its implementation. Discover the system's benefits for the driver/passengers, society and environment, as well as other practical details such as its availability on the market, current state of research, and more!

ANIMATIONS - learn more from specifically designed brand-free animations and diagrams. In addition, pictures, animations and videos contributed by the industry, allow users to witness the technology in action to better understand what the system is about and how it works.

Help promote the eSafety technologies!

Use the eSafety Interactive Car for your own dissemination activities! Request your own version free-of-charge from eSafety Support to embed in a website or make a CD-ROM for end users (automobile club members, driving schools, road safety exhibitors, etc.)

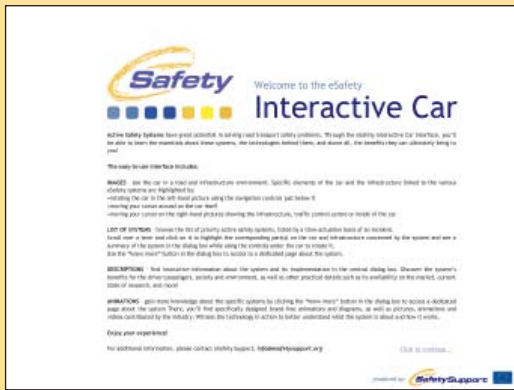

You are also encouraged to contact eSafety Support if you'd like to contribute any relevant images, animations or video material that could be included in an updated version of the Interactive Car.

For additional information, please contact eSafety Support, info@esafetysupport.org

About eSafety Support:

eSafety Support is a European Commission-funded project assisting the eSafety initiative in its goal of reducing the number of fatal road accidents in Europe. One of the main objectives of eSafety Support is to create and execute an eSafety awareness strategy with the main goal of reaching the general public, end users, and policy makers through different tools and methods of dissemination.

eSafety Interactive Car

The welcome screen provides instructions on the use of the interface.

Rotate and zoom the car and move the mouse on the images to get explanations of the different systems.

Browse the list of systems and click to get a summary of the system and see the relevant parts of the car and infrastructure highlighted.

Click the "know more" button and get access to the dedicated page about the system, containing explicative illustrations, animations and videos.
